

# Vacuum Contactor

## Application

Switchgear system  
Power factor correction system  
Electric load control

Series SPGL BS

High Power Quality  
Long useful life  
Environment Friendly

**New  
design**

available on request*

The air contactor uses a vacuum arc extinguishing chamber to extinguish the arc, which is used to frequently connect and cut off normal working current. It is usually used to remotely connect and disconnect 6KV, 10/12KV AC motors and capacitor bank with frequent starting and stopping of medium and low voltage.

### Features

Vacuum contactors have strong arc extinguishing ability, good voltage resistance, high operating frequency, long service life, no arc spraying, small size, light weight, and long maintenance cycle.
