

Oil Power Transformer

Application
Power supply system
Power delivery

High Power Quality
Long useful life
Environment Friendly

Series SPGL OPT

Purpose of power transformer:

Economical transmission of electricity: High voltage transmission reduces energy losses on transmission lines;

Reasonably allocate electrical energy: supply power according to the voltage level and load demand of the user area;

Safe use of electrical energy: Transformers are equipped with various protective measures..

Transformers can be equipped with temperature control and display systems according to user needs, and can be used in conjunction with temperature control systems.
